2. Colouring and Protecting the Wood

Italian Golden Ground A+B

2.1.- Wood fibres: Colouring and Protecting

Italian Golden Ground A+B is a water based product which develops an aged wood-look in the Wood and also introduces a golden-orange colour which enhances the grain and the annual rings. In addition, this product protects the wood against the degradation.

Italian Golden Ground A+B includes two water based products. These are products which are easy to apply (by sponge or brush). Product “A” develops the colour in the wood under UV light (6-8 hours):

The component “B” application technique is similar to component “A” but “B” doesn’t need UV light to be dried.
